# Welcome to LUNA

This document is intended mainly for system administrators and secondarily for LUNA administrators to provide context and information on how to Install & Configure LUNA. Readers are expected to have a basic knowledge of the UNIX / Windows Operating Systems, Microsoft SQL Server / Oracle Databases / MySQL, and Apache Tomcat and Jboss JSP Server.

# LUNA Components are as follows:

**LUNA Publisher:** Schedules and is used to pull data out of the Insight Collection Manager, storing it in an XML format. The LUNA Publisher then converts the archive data into a Lucene index for each collection and merges all Collection indexes into one single search index. Once merged, the LUNA Server is placed into a maintenance mode and the newly merged index replaces the existing one.

**LUNA: LUNA** is the dynamic web based front end to Insight collections. With LUNA, users can perform simple keyword searches as well as more complex structured queries, and control how they view, browse, and organize their results to create groups and presentations. LUNA includes the Web 2.0 tools your users are demanding which enable them to save and share their work by linking and embedding any view, image, group, or presentation.

**LUNA Server:** The LUNA Server is the server side component behind the LUNA client. Collections published to LUNA are indexed on the LUNA Server. The LUNA Publisher will automatically update the indexes based upon a schedule that you define.

# Insight's Components are as follows:

**User Manager:** The User Manager functions as a single point of entry for all Insight Collections and Personal Insight Managers. It consolidates the functions of authentication and authorization for all shared resources within Insight and for LUNA. The User Manager can integrate with an existing security infrastructure if an institution already has a single sign-on solution in place. The User Manager also provides access to resources such as shared folders and groups within Insight. LUNA enables end-user management of viewing preferences, and storage folders for media groups and presentations.

**Collection Manager:** The Insight Collection Manager provides a common interface between client requests and the underlying data repository. Each Collection Manager may contain multiple collections and Virtual Collections of consistent or heterogeneous structures. The Collection Manager also functions as a broker between the clients (the Insight Java Client, Inscribe data editor, Studio (LUNA Publisher and XML Gateway) and the underlying database, coordinating search requests, and data updates.

**Personal Insight Manager:** The Personal Insight Manager is a specialized version of the Collection Manager which supports the creation of Personal Collections with the Insight Java Client.

**Media Manager:** The Insight Media Manager is built around a basic JSP Server, and manages access to Insight's media content. The Media Manager supports direct upload of processed content and also manages access to the JPEG2000 wavelet images that power Insight's Image Workspace.

**Java Client:** The Insight Java Client provides an additional interface for searching, viewing, and managing images, audio, video, and other media. The Java Client also provides end-user collection building tools with Personal Insight and the ability to create Virtual Collections – a subset of content with different access levels.

**Inscribe**®: The optional Inscribe data editor is an end-user cataloging tool designed to support all of an institution's cataloging needs. The Inscribe data editor includes built-in support for controlled vocabularies, date and numeric validation, and complex data relationships. Inscribe also supports an institution's workflow requirements by facilitating the publishing and review processes.

**Studio:** Studio provides collection administrators with the tools to build and manage collections. Studio is a wizard-based tool supporting batch processing of media, batch import of metadata, user management, catalog template creation and management, and other basic functions. The LUNA Publisher is accessible from within the Studio client.

Administrator Tools: The Insight Administrator Tools allow a collection administrator to dynamically manage collections. Components of the Insight Administrator Tools include tools for batch media processing, user and resource management, data indexing, and configuring of the search and user interface.

**JPEG2000 Wavelet Encoder:** The Administrator Tools and Studio include a JPEG2000 Wavelet Encoder. Wavelet encoded images improve performance when accessing large images, reduce storage requirements, and optimize network usage on image delivery.

**Insight XML Gateway:** The XML Gateway provides a web-services based interface for searching and retrieving content stored within Insight collections. The XML Gateway is middleware which allows backend interaction between Insight and other XML aware applications.

# What's New in Insight 6.2.2

Select Features of LUNA

- "Buy" Link. Designed for Pictopia printing services but developed in a generic way that may be used for other print on demand services. See A Guide to LUNA (link to page in the doc) for details on how to set up "Buy" Link in LUNA.
- Enhanced Image Export. Ability to select from multiple image resolutions when exporting images from the Detail View in LUNA. Setting the maximum image export resolution is controlled in the credentials
- Improved Featured Media Display. Administrators can create a Featured Media group for "All Collections" in order to have select images display in the Featured Media window when a user selects "All Collections". If a Featured Media group has not been created for "All Collections", or for individual collections, LUNA will randomly select the images for display in the Featured Media window each time a user selects a collection. For this option, LUNA will randomly select a page from Browse All, then randomly pick 8 thumbnails from the page as the Featured Media.
- Improved Embed This. Web widgets now retain the black background of the LUNA Workspace when embedded.
- Authentication workflow enhancement. LUNA can be set up to send a copy of the welcome note that is emailed upon registration back to the LUNA Admin so that they can assign appropriate access credentials.

# What's new in Insight v6.2.1

Select Features of LUNA

• Annotations can be added to images from the Detail View or the Workspace and made public or private. Annotations are versatile and can be text based as well as able to support HTML code and embeddable widgets- like Google Maps or YouTube content. All users have the ability to create private annotations or Media Group shared annotations. Insight Administrators determine which users have credentials to create collection level annotations for public view (see Credential Settings in Guide to LUNA to grant access).

For those with existing annotations in Insight, annotations saved at the collection level in Insight will now display in LUNA.

• **My Uploads** allows users to upload image and various other file types from their desktop directly into LUNA. Content added to My Uploads will remain private or can be shared by adding to a public Media Group or by creating a link to the image from the LUNA Workspace or Detail View. Insight Administrators determine which users have credentials to access My Uploads as well as the types of files users can upload. Supported file types include Jpeg, Tiff, PDF, bmp, gif, png. Flv, Audio and Video files (see Credentials in a Guide to LUNA to grant access).

**Note**: My Uploads may add load to the server. The Media Manager and Processor for My Uploads can be installed on a separate machine.

- Support for searching data containing diacritics (requires re-Publishing).
- Facets/Categories are cached to improve start-up times for LUNA.
- Ability to upload the custom graphic header in the LUNA Publisher.
- Support for Tomcat
  - Added in addition to Jboss to ease configuration and minimize conflicts. You may continue to use Jboss or switch to tomcat.

## What's new in Insight v6.2

#### Select Features of LUNA

The LUNA Publisher: Sharing and Receiving collections from LUNA Commons.org

- Retrieve LUNA Commons collections for local LUNA display.
- Prepare LUNA Collections to publish to the LUNA Commons.

#### User Features

#### Media Groups

- Ability to quickly check the content of your Active Media Group via the new Active Media Group Panel while browsing and working with content.
- Ability to instantly change the Active Media Group using an easily accessible pull down menu.
- PowerPoint export of a Media Group with associated image data.
- Original filename is preserved when exporting images.

#### Navigation

- Larger icons throughout for working with media, Media Groups, and Presentations.
- Forward and Back buttons on all pages.
- Improved sorting of a single collection by available data fields.
- Improved Category Browsing.

#### Discovery

- New intuitive Advanced Search.
- Addition of wildcard searching.
- Ability to perform a keyword search in the Media Panel of the LUNA Workspace.

#### Presentations

- Improved Presentation creation with faster loading of Media Panel, faster loading of slides
- Improved speed of loading presentation in playback back mode.
- Improved image quality, and image metadata included when exporting. Presentations to PowerPoint.

#### Security

• Https displays on login page when login SSL is enabled.

# Administrative Features

#### Administrator Tools

- Process for removing collections from LUNA using Admin Tools and LUNA Publisher.
- View and change ownership of Media Groups and Presentations using Admin Tools.

### Backend

- Enhanced LUNA collection authorization to be consistent with Insight authorization when using LDAP.
- Enhanced LUNA collection authorization to be consistent with Insight authorization when using LDAP.

# Installing LUNA

## Introduction

LUNA is an additive component to Insight. You will need to have a working Insight installation and collection(s) to make full use of LUNA.

LUNA can be installed into any of the supported Insight configurations with the exception of Oracle 8. Add the necessary database and ensure you have a minimum of 512MB of free memory, or the recommended 1500MB of free memory, on your server.

There are two major components to LUNA, the LUNA Publisher and LUNA. Each item requires a database. Follow the same guidelines described in the Insight installation to prepare these databases. Both databases will only store user generated information and will not store contents of the collections. This means the storage requirements for these databases are fairly small. 100MB should be plenty of space.

Create two databases. One for LUNA and one for the LUNA Publisher

## Running the Installer

The LUNA installer, like the Insight installer, requires a GUI. If you are installing on Linux or Solaris, you will need X Windows to run the installer or other GUI interface.

Start the LUNA installer on your system and follow the prompts described in the following section.

#### Serial Number

The install requires a Serial Number to continue the installation process.

As a licensed institution, you should have been issued one. If not, contact our support department to obtain a valid licensed Serial Number..<u>lunasupport@lunaimaging.com</u>

🖳 LUNA Server Suite 6.0	
	Enter Serial Number
<ul> <li>Introduction</li> <li>General Configuration</li> <li>Admin User and Pass</li> <li>JBoss Setup</li> <li>LUNA Configuration</li> <li>SMTP Email Setup</li> <li>Autionitication Setup</li> <li>Application Configuration</li> <li>Database Configuration</li> <li>File Storage Locations</li> <li>Pre-Instellation Summary</li> <li>Install Complete</li> </ul>	This LUNA Suite installation requires a serial number to continue. Please Enter the Serial Number:
InstallAnywhere by Macrovision – Cancel	Previous Next

# LUNA Application Configuration

If this is the first time you install LUNA, then you must choose the first option "Configure LUNA Applications and create database tables".

If this is a subsequent installation and you just want to **upgrade** or reconfigure the LUNA application without deleting any user generated information, then choose "Upgrade or Reconfigure LUNA (Do not create db tables)".

#### NOTE: If you are upgrading, Stop Jboss before running the installer

LUNA and the LUNA Publisher are deployed using Java <u>WAR</u>. files. This option will just configure the WAR file and deploy it.

S COUR DELACT DAICE 010	
	LUNA Application Configuration
<ul> <li>Introduction</li> <li>General Configuration</li> <li>Admin User and Pass</li> <li>JBoss Setup</li> <li>LUNA Configuration</li> <li>SMTP Email Setup</li> <li>Authentication Setup</li> <li>Application Configuration</li> <li>Detabase Configuration</li> <li>File Storage Locations</li> <li>Pre-Installation Summary</li> <li>Install Complete</li> </ul>	If this is your first time installing LUNA you will need to create the database tables (default), If you are upgrading or reconfiguring LUNA to change some preferences, Choose "Upgrade or Reconfigure LUNA (Do not create db tables)" © Configure LUNA Applications and create database tables © Upgrade or Reconfigure LUNA (Do not create db tables)
InstallAnywhere by Macrovision - Cancel	Previous

For Upgrade or Reconfigure Only

Choosing install sets for upgrade

If you have modified your jboss version for any reason, you may need to apply those changes again once the install is complete.

# Choose Install Set

For the Initial installation, you will generally choose Typical. This will include all system components.

- LUNA
- LUNA Publisher
- JBoss
- Tomcat (New in 6.2.1)
- Media Manager & Media Processor
- Administrator Tools

# My Uploads Server Only

As of version 6.2.1+, LUNA supports uploading of end user's images and content. This feature requires a Media Manager and the Media Processor components.

Since these components place image processing on the server, you may want to separate this activity to another machine depending on the level of use expected.

If you choose to install the My Uploads Server independently, then you should install this component first. During the install of the LUNA component, you will be asked the server name and port of your My Uploads server.

This will install a Media Manager, Media Processor and Tomcat.

# Custom Install

For subsequent installations, you may wish to choose to install a specific component. You can choose to install any of the following system components.

- LUNA
- LUNA Publisher
- JBoss
- Tomcat (New in 6.2.1)
- Media Manager & Media Processor
- Administrator Tools

LUNA Server Suite 6.2.1	
	Choose Install Set

### Specifying an Administrative Username and Password for LUNA

LUNA requires you to specify an administrative username and password. This username and password will be used for authentication within the Administrator Tools and for accessing the JBoss management consoles. Users with this username and password have access to tools that can manage LUNA collection access and Credentials and modify LUNA's configuration, so be careful who it is shared with.

**NOTE:** This password is not encrypted. Do not use your network or system administrator password.

🖳 LUNA Server Suite 6.0

	Set Institution Name
<ul> <li>Introduction</li> <li>General Configuration</li> <li>Admin User and Pass</li> <li>JBoss Setup</li> <li>LUNA Configuration</li> <li>SMTP Email Setup</li> <li>Autientication Setup</li> <li>Application Configuration</li> <li>Database Configuration</li> <li>File Storage Locations</li> <li>Pre-Installation Summary</li> <li>Install Complete</li> </ul>	This name is used on the LUNA Collections page to indicate the owner of the local LUNA collections         It will be in the format " <institution name=""> Collections"         For Example: LUNA's Collections         Enter your Institutions Name</institution>
InstallAnywhere by Macrovision – <u>C</u> ancel	Previous

In the example below, it is set to Luna.

#### Collection Selection

・ 謳 All Collections (56,955)

Luna Collections

- Herbert F. Johnson Museum of Art
- NASA Human Spaceflight Collection
- NASA Great Images in Nasa Collection
- David Rumsey Collection

## JBoss and Tomcat Setup

The LUNA application and LUNA Publisher are served via JBoss or Tomcat. The installation will take care of all major configurations with JBoss and Tomcat but you may choose to select different ports for the application to run on.

**Note:** You are also choosing how much memory to allocate to the application. Make sure this much memory is freely available or the server will have out of memory errors.

	JBoss/Tomcat Setup
<ul> <li>Introduction</li> <li>General Configuration</li> <li>Admin User and Pass</li> <li>JBoss Setup</li> <li>LUNA Configuration</li> <li>CONFIGURATION</li> </ul>	Setup will configure JBoss/tomcat for the LUNA Serviet Components. # My Uploads Media Manager and Media Processor

My Uploads allows users to upload image and various other file types from their desktop directly into LUNA.

This address must be available to all end users who will be accessing this feature.

### Important! This is not your Insight Media Manager

Typically this will be the same address and port as your LUNA and LUNA Publisher but it can be installed on a different server.

🐙 LUNA Server Suite 6.2.1	
	Media Manager and Media Processor
Introduction General Configuration Admin User and Pass JBoss Setup LUNA Configuration SHTP Email Setup Authentication Setup Addition	To support My Uploads server, you need to identify which server your Media Manager/Media Processor are on. This needs to be an address that is accessable to all clients accessing the My Uploads server. Your My Uploads Server may be located on a different Server
Database Configuration	Your Jboss/Tomcat Hostname is:
File Storage Locations	Media Manager Hostname www.example.com
Installing	Your JBoss/tomcat Port # is: 8180
Install Complete	Media Manager Port # 8180
InstallAnywhere by Macrovision -	
Cancel	Previous Next

# LUNA Configuration

This section allows you to choose how the LUNA application is generally configured.

# Insight User Manager Address

LUNA can use your existing Insight User Manager to grant access to your collection resources. You do not need to create the accounts. As a user is logged in, the username is passed to the LUNA system (not including the password) and the user is granted access to the same collections that they had access to in Insight.

## Header Graphic Hyperlink

You have the option to make a link in the Header Graphic go to a specific http address. By default the address will return to the LUNA collections Page (/luna/servlet).

This feature is useful if you want to create a launch page for the LUNA application and from LUNA the user can return to the launch page.

🖳 LUNA Server Suite 6.0	
	LUNA Configuration
<ul> <li>Introduction</li> <li>General Configuration</li> <li>Admin User and Pass</li> <li>JBoss Setup</li> <li>LUNA Configuration</li> <li>SMTP Email Setup</li> <li>Authentication Setup</li> <li>Application Configuration</li> <li>Database Configuration</li> <li>File Storage Locations</li> <li>Pre-Installation Summary</li> <li>Installing</li> <li>Install Complete</li> </ul>	Insight User Manager Address You have the option to make the Header Graphic hyperlink go to another http address. By default this hyperlink will return to the Collections page at the following address: Auna/servlet /luna/servlet
InstallAnywhere by Macrovision — Cancel	Previous

## Enable Google ads

If you would like to place ads on the content of your site to generate potential revenue to support your collections, just check the ads box. The ads will be placed on the right side of the application. Go to <u>http://www.google.com/intl/en/ads/</u> to sign up for an AdSense account. You will be prompted later in the installation to provide additional information specific to your AdSense account.

# Enable End User Registration

LUNA has built in end user self management. If you would like your end users to manage their own accounts (allowing them to create Media Groups, presentations and search External Media), select this item. Later in the configuration you will be asked for your email server information for outgoing messages.

## **Access LUNA Commons Collections**

Selecting this option indicates you want to receive free collections from the LUNA Commons. You will be required to provide additional information later in the installation process.

## Share Select Collections with the LUNA Commons

Selecting this option indicates you want to share some of your collections with the LUNA community. You will be required to provide additional information later in the installation process.

## Enable SSL for Login

To prepare your system to support SSL during login, select this item. You will also need to install a certificate to implement the SSL login capabilities.

## Enable Google Analytics

Prepare your system to support Google Analytics. You will also need to have a Google Analytics account to make use of this option. See <u>http://www.google.com/analytics</u>

## **Access LUNA Commons Collections**

### LUNA Commons Server Address

To access the LUNA Commons, you may need to enter the appropriate Community Commons server address (the default will work unless told otherwise).

### Enter your Institution's Short Name and your Serial Number

When you were issued your Serial Number, you were also issued a Short Name for your institution. This Short Name and your Serial Number are your keys to access the LUNA Commons collections.

Enter a string of letters and numbers with no spaces or special characters. This string will be used in the LUNA Publisher to trigger a download of the LUNA Commons content.

🐙 LUNA Server Suite 6.2

# LUNA Publisher Maintenance Setup

The information supplied in this panel is used when LUNA needs to be placed into a maintenance mode so that you can perform server adjustments or when the LUNA Publisher needs to replace the Lucene index with an updated version.

The maintenance mode is invoked via a URL with a security key. We suggest making the security key obscure by using only web friendly characters and letters.

## Start the Install Process

This may take several minutes depending on the server speed and how you are accessing the installer.

Before Installing LUNA and the LUNA Publisher you will see this **IMPORTANT** message.

#### \*\*\*\*IMPORTANT NOTE for users of LDAP configurations\*\*\*\*

The Installer will now backup any existing LUNA and LUNA Publisher configurations. This backup will be placed in <USER INSTALL DIR>/luna\_backups

With any upgrade, you should perform your own backups of the file system and databases before installing any new version.

#### IMPORTANT LDAP AUTHENTICATION INFORMATION

Any manual configuration of LUNA will not be retained and you will need to reapply any configurations once the install is complete. This relates to any LDAP modifications to the applicationContext file. Your existing LUNA and LUNA Publisher will be backed up to the luna\_backups in your install directory within a dated zip file.

# Starting LUNA and the LUNA Publisher

You can start these two servers by starting the Tomcat or the JBoss server.

Go to: <Install Directory>/tomcat/bin or <Install Directory>/jboss/bin

For Tomcat:

We have also supplied you with our standard java service wrapper version for starting and stopping the application:

start\_jboss.bat on windows and start\_tomcat.sh for Linux and Solaris will start tomcat in a console mode.

If you would like to start tomcat as a service on windows, we have supplied you with the install\_as\_service.bat file.

If you want to run jboss in the background using the java service wrapper on Linux or Solaris, you can start it with: ./tomcat\_service.sh start

The script has the following options: console | start | stop | restart | status

For Jboss:

You can use the standard jboss supplied run scripts run.bat or on Linux and Solaris you can start the servers by executing the run.sh script. If you want to run this in the background we suggest running: nohup ./run.sh &

We have also supplied you with our standard java service wrapper version for starting and stopping the application:

start\_jboss.bat on windows and start\_jboss.sh for Linux and Solaris will start jboss in a console mode.

If you would like to start jboss as a service on windows, we have supplied you with the install\_as\_service.bat file.

If you want to run jboss in the background using the java service wrapper on Linux or Solaris, you can start it with: ./jboss\_service.sh start

The script has the following options: console | start | stop | restart | status You should see something like one of the following:

The LUNA application will now be available at .<u>http://www.example.edu:8180/luna/servlet</u>. and it will look similar to the following page:

# Testing the JPEG2000 Decoder

.http://localhost:8180/MediaManager/jp2ktest

You should get a page like the following:

If you see any errors, see the **Testing the JPEG2000 Decoder & the Media Manager** in the Install and Configuration Guide.

# Adding Insight Content to LUNA

# Introduction

It's fairly easy to add Insight content to LUNA but first you should know what LUNA is and what it is not.

LUNA is a search interface and a place to work with media content. LUNA is not the repository of the content. LUNA allows the end user to select, organize and make use of various image and media content.

As of version 6.2.1, LUNA supports three kinds of source content. You can access and use Insight content and you can access and use content from Flickr and content from your own desktop using the My Uploads feature.

Insight Studio is used to prepare content for LUNA using the LUNA Publisher and the LUNA theme header graphic creator. These tools are available from the Insight Studio Task Menu.

Publish Collection to LUNA (LUNA Publisher)

Modify LUNA Theme Graphic

**Note:** The preferred method to upload a Header Graphic is now located in the LUNA Publisher NOT Insight Studio. See section on the <u>LUNA Theme Header Graphic</u>

**Note:** You do not need to upgrade your Insight Collection Managers to work with LUNA. LUNA will work with all 5.x Insight Collection Managers.

The only suggested adjustment you need to make is to update the language bundles on the Insight User Manager. This will ensure that you see the correct text labels while using the 6.2.2 Insight Studio tool.

## The LUNA Publisher

So what does it mean to add content to LUNA? Well it's pretty simple; it means extracting all descriptive data from Insight and placing it into an index that LUNA uses to search. It also sets up and provides LUNA with information to connect to the Insight collection.

The LUNA Publisher is the tool you use to do the following:

- Schedule when and how often the LUNA collection index is updated from the Insight Collection.
- Setup LUNA specific characteristics
  - Choose Media Summary fields (provides additional roll-over information).

o Choose the Who, What, When, Where fields used for filtering search results.

- Identify the URL to the LUNA header graphic.
- Using the Merge and Load Task, all individual collection indexes are merged into a single index and then loaded into the live LUNA system.

#### LUNA Theme Header Graphic

The LUNA theme header graphic is the background that shows up at the top of the LUNA interface and can be different for each collection. This is used to provide collection identity. The graphic needs to be 754 x 65 and should fit the theme being used by fading to a solid color on the right of the graphic (R=133, G=124, B=117 or the hex is #857C75).

To upload your Header Graphic, locate the Header Graphic section of your LUNA Publisher.

Click "Select header graphic".

	<u> </u>

The default is set to /luna/images/luna-default-header.jpg

**Note:** This path refers to an image stored within the LUNA software. This is used as the default location.

LUNA

# Let's Get Started

## Prerequisites

You need the following to proceed:

- LUNA and the LUNA Publisher need to be installed and running.
- 6.x version of Insight Studio configured with access to the LUNA Publisher.
- At a minimum, the language bundles on the Insight User Manager need to be updated.
- Insight Studio access to the collections you will be adding to LUNA.
- Inscribe access to the collection(s) you will be publishing.

**Note**: The LUNA Publisher pulls the descriptive metadata and media information from a form of Inscribe. In certain collections that were created prior to 5.x, this content may not be properly accessible. If you do not see the correct images or data in the Inscribe tool, contact Luna's support department for assistance in preparing your collection for LUNA.

Collections that were created in Insight 5.x+ will not have this issue.

## **Publishing a Collection**

Start Insight Studio, select the collection you want to publish to LUNA and from the Main Task Menu select the LUNA Publisher.

Next, select "Launch LUNA Publisher".

This will launch a web browser and connect to the LUNA Publisher.

Connecting I	to LUNA Publisher	×	
01			
Please wait while connecting to LUNA Publisher			
_			

Once in the LUNA Publisher, you can make your selections in the following areas:

- Enter a Task Description (optional).
- Choose the Theme for your collection.
  - Only "default" is available in the initial release of LUNA. Additional themes will become available in the future. These new themes will change the color scheme of the entire application.
- Choose the LUNA Header Graphic URL for your collection. If you have not selected one, the default graphic will be used.
- Choose the Insight User Group that will be used to access the data from your Insight Collections.
- Select the Title Field from the drop down list. This Title will be used to identify individual media items on several pages within the LUNA application, such as the Detail view and as a label in a slideshow.
- Select up to 4 Summary Fields to display. The Summary Fields will display as the user moves their mouse over the thumbnail images.
- Drag and Drop up to 20 fields into the Who, What, Where and When categories.
- Choose a recurring schedule for the LUNA Publisher to perform updates of the LUNA search index.
- You have 4 options When completing this task
  - Save Task (will only save the task)
  - Save and Run Task (will save and run the task now)
  - Save and Schedule Task (will save then execute the task on a schedule)
  - o Save, Schedule and Run Task

Once you schedule this task, the LUNA Publisher will do the following:

- Archive the data from Insight.
- Produce an Index for the Collection.
- When the Merge and Load task is activated, all collections that have been indexed will be merged and the new Master Index will be created and placed on the live LUNA server.

$\sim$	
()	
1.1	

Note: You need to activate the Merge and Load task before LUNA will make the collections live.

## Activating the Merge and Load task

#### So what is Merge and Load?

During the Publishing process, a collection is turned into a searchable index for a specific collection. Each index is stored in the collection\_indexes folder on your server.

Once you have published all collections that you currently want to make available in LUNA, these separate published indexes need to be merged into a single index. Then when the merge process is complete, the merged index needs to be loaded as the active current index. Once loaded you can search all collections that have been published to LUNA.

#### Now to activate the Merge and Load task

In the LUNA Publisher task list, locate the Merge and Load task. This will be the one at the top of the List. Click the Modify button.

## Testing your LUNA Collections

Once your collection(s) have been Published, Merged and Loaded, you will be able to view your Collections in LUNA.

The address to your LUNA collection will be similar to the following. <u>http://www.example.edu:8180/luna/servlet</u>

If you would like to access your collection(s) without the port number (8180), you will need to configure the system to use the AJP connector. There are instructions on how to work with the AJP Connector for both Apache and IIS available on the web.

This document does not cover how to configure the AJP connector.

# Migrating Insight Media Groups and Shares to LUNA

# Introduction

You can perform a one time only migration of Media Groups and Share Folders from your Insight Collections to LUNA.

This process is a single direction process and you will NOT be able to synchronize Media Groups between LUNA and Insight.

You should plan your timing of this process carefully. This should be done with your end users knowledge of what and when this process will take place. Your end users may have a significant amount of work invested in creating and managing these Media Groups and Shares. They should also be very familiar with the new LUNA interface and how they can access their Media Groups once migrated.

# Migrating the Content

#### Prerequisites

On the Install disk for LUNA you will find the utility for the migration in \utilities\media\_group\_migration\_to\_LUNA folder

- You will need access to each Insight Collection Manager on your server and database port access. Basically, if you can run the Admin Tools from the machine doing the migration, then you have sufficient database access to perform the migration.
- You will need the InsightServer.dat for each collection you plan to migrate the Collection level Groups from.
- You need the InsightUserServer.dat for the User Manager.
- You need the LunaServer.dat that was created at the Install time of LUNA. This file is contained in <LUNA Install directory>/resources/For\_Media\_Group\_Migration

These files have the database connection information in them and will be used for the migration.

- You will need access to the User Managers Image-Group-Files folder. This can be a copy or the original.
- The utility uses Java 1.4 and it will need to be available for the migration. All of the Insight servers use Java 1.4 so you can reference the Insight Server version.
- Make sure all Shares have an owner. This can be done using the Admin Tools and looking at the Owner Column of the User Shares. If they do not have an owner, please assign one or a random owner will be assigned at the time of migration.

#### IMPORTANT NOTE

If you are migrating virtual collections, you will need to modify the VCIDToLunalID.txt file.

On the left enter the Insight VCID for the collection VC\_Archivision\_Digital\_Research\_Library\_(Base-1)

Then enter a tab character

Next enter the Institution ID for the LUNA collection ARCHIVISIONACM\_Base-3

For example:

VC\_Archivision\_Digital\_Research\_Library\_(Base-1) ARCHIVISIONACM\_Base-3

Do this for each virtual collection you are migrating from.

## Steps for the Collection Level Group Migration

- 1. Copy the media\_group\_migration\_to\_LUNA folder to the location where you will perform the migration.
- 2. Copy the LunaServer.dat into your media\_group\_migration\_to\_LUNA folder.
- 3. Edit the LunaServer.dat.
  - a. Modify the MediaGroupDefaultPassword= property to set the password used to Protect the Media Groups in LUNA.
  - b. Set the ImageGroupFileDir= to point to the Image-Group-Files folder.
- 4. Copy the InsightServer.dat into your media\_group\_migration\_to\_LUNA folder.
- 5. Edit to the run\_collectiongroupexport.bat (windows) or run\_collectiongroupexport.sh (Linux or Solaris) to point to a local version of Java 1.4 if it is not in your PATH environment.
- 6. Execute the run\_collectiongroupexport script (only once) if you run this twice, you will end up with duplicate Media Groups.
- 7. Verify that the Media Groups are in your LUNA system located in Explore/Media Groups.

8. Repeat for each Collection Manager that you are migrating Collection Level Media Groups from by replacing the InsightServer.dat.

# Steps for Migrating Insight Shares and Media Groups

- 1. Copy the media\_group\_migration\_to\_LUNA folder to the location where you will perform the migration.
- 2. Copy the LunaServer.dat into your media\_group\_migration\_to\_LUNA folder.
- 3. Edit the LunaServer.dat.
  - a. Modify the MediaGroupDefaultPassword= property to set the password used to Protect the Media Groups in LUNA.
  - b. Set the ImageGroupFileDir= to point to the Image-Group-Files folder.
- 4. Edit to the run\_shareexport.bat (windows) or run\_shareexport.sh (Linux or Solaris) to point to a local version of Java 1.4 if it is not in your PATH environment.
- 5. Execute the run\_shareexport script (only once). If you run this twice, you will end up with duplicate Media Groups.
- 6. Verify that the Media Groups are in your LUNA system located in Explore/Media Groups.

# Managing LUNA with the Administrator Tools

# Introduction

The Administrator tools have been enhanced to incorporate tasks for managing the LUNA application and configuration.

In the Administrator Tools you can:

- Manage user rights
- Manage Credentials
- Manage IP range access privileges
- See what collections LUNA has loaded
- Manage the LUNA Application Configuration
- Manage the Collection Properties
- Place the LUNA Application into maintenance mode

# Managing User Rights and Access Privileges

Before defining how to manage users and their privileges, you need to understand what options exist and how they are integrated with current Insight User Management.

If you have been working with Insight, then you should be familiar with how Insight grants access to collections. LUNA can work with existing Insight authenticators to grant your users access to your collections.

During your installation, you were asked for your User Manager's address. If you are using the default Insight User Manager to grant access to your collections, then you do not need to do anymore work to allow your users access to collections in LUNA.

LUNA also has several other authenticators that can be used to grant access to your Collection resources.

- LUNA self registration and user management
- Integrate with Active Directory LDAP
- Authenticate via LDAP

# LUNA Self Registration

During the install process you were given the option to let users self register in LUNA. If you selected this option you will see the Register option at the top of the LUNA application.

Welcome   Login   Register	Search LUNA
	Search
	Advanced Search

This allows the user to create and manage their own account in LUNA. Once registered, the user will be granted the default privileges defined in the default Credential.

# Integrate with Active Directory Using Kerberos and LDAP

As with Insight, LUNA can be integrated with Active Directory to grant access to your Collections.

To configure LUNA with your Active Directory server, you will need to contact our support department for instructions on your specific configuration <u>lunasupport@lunaimaging.com</u>. This document does not go into the configuration details of Active Directory integration.

## Integrate with LDAP

As with Insight, LUNA can be integrated with LDAP to authenticate your users and grant them access to your collections.

To configure LUNA with your LDAP server, you will need to contact our support department for instructions on your specific configuration <u>lunasupport@lunaimaging.com</u>. This document does not go into the configuration details of LDAP.

# Advantages of LUNA Authentication Methods Not Available in Insight Java Client

LUNA authentication has been designed to be more flexible to allow for future authentication methods and to allow for mixed authentication methods to be used.

LUNA can be configured to use more than one authentication method in your environment. LUNA can be setup to step through any number of authenticators. For example:

- You can have LUNA access the Insight User Manager and also allow for LUNA self registration.
- You can have an LDAP server authenticate and use the Insight User Manager to grant access to individuals who are not in your LDAP server.

There are many ways LUNA can be configured. Please contact <u>.lunasupport@lunaimaging.com</u> for any questions you might have.

## LUNA's Escalating Collection Access

LUNA has also been designed to grant increasing access as a user passes certain conditions.

At your institution you may want to do the following:

- Level 1 anonymous user off site but you still want to make some of your collections accessible.
- Level 2 (within a lager block of IP's) on site privileged collections are accessible.

- Level 3 (within a restricted block of IP's) on site but in a particular area where the user is granted access to restricted collections.
- Level 4 (logged in to LUNA) granted access to even more collections with the ability to export.

This is a very flexible system and can meet many needs for granting varied collection access.

# Credentials

Credentials are used to define a set of privileges to selected collections.

There are four Credentials by default in your LUNA application. You are responsible to define what each one of these will be used for. You can create as many Credentials as you want.

With a Credential you can:

- Define what collections are accessible
- Indicate if exporting will be allowed (this includes media and presentation exports)
- Define it as the default (only one allowed)
- Indicate if the LUNA Commons (publicly shared collections) will be accessible
- Grant Access to My Uploads
- Define the My Upload formats that a user can upload to LUNA

Only one credential can be assigned to:

- An IP Range
- A User

Run Maintenance Mode twice to load your new Credential settings.

# **Credential Settings**

Using Credential Settings, you have the following three options: 3, 4 and 5.

- 3 indicates the user has up to Size 3 access (768 pixels on the long side).
- 4 indicates the user has up to Size 4 access (1536 pixels on the long side).
- 5 indicates the user has full access privileges to the images.

Allow Collection Level Annotation. This grants the user the ability to save an annotation that will be accessible to all users for a specified collection.

- Credentials	5	1 01000000 1	Anonymous Osci
		1-Stanford~6~1	Anonymous User 🛛 🕅
— 🔜 Credential	Settings	1-RUMSEY~9~1	Anonymous User 👘 J
– 📄 Extended 🤅	Collection Droportice		🛉 nonymous User 🛛 🕻
– 🚞 IP Ranges	📔 Edit Credential Collectio	on Map- 1-RUM 🗖 🗖 🖻	🖣 honymous User 🛛 🛚
🖵 🔚 Server Ma			nonymous User 🛛 F
	Max Resolution: 5		nonymous User 🛛 🤇
			ionymous User 🛛 🖡
	⊡ Colle	ction Annotation Enabled	nonymous User 🛛 F
	Save	Cancel	
	5440		

Access to LUNA Size 2 (384 pixels on the long side) is automatically assumed.

# User Settings

Each user will be assigned a credential.

Users cannot be added from the Admin Tools. Instead, they will be created through the following:

- User Self Registration (passwords will display in Admin Tools)
- Automatically migrated from the Insight User Manager on first login (passwords never copied)
- From Active Directory (passwords never copied)
- From LDAP (passwords never copied)

Each authenticator will add its own user and each user is granted the default Credential. You can reassign a Credential to a user at any time.

If you are using the Insight User Manager to get access to your collections, you will receive access to all collections you had access to in Insight.

### **IP** Ranges

IP Ranges are another way of assigning Credential level privileges. You can set up IP ranges to grant access to specific areas and access to specific content.

Run Maintenance Mode twice to reload your new settings. Also to test make sure you quit all browsers on the tested system then test your access change

# Media Collections

Media Collections shows you which collections have been added to LUNA.

Control Panel - Main					
📄 Console Root	ID	CollectionName			
🗄 з User Managers	NVA2~9~9	NASA Solar and Heliospheric Observatory Collection			
🕂 📕 Collection Managers	nasaNAS~8~8	NASA Dryden Flight Research Center Collection

- Credential Settings	meme.	uelault	
— Extended Collection Pronerties		🗌 Use as Default	
- D IP Ranges			
Server Maintenance Mode			
		Save Cano	cel
LL		, J	

Extended Collection Properties will allow you to do the following:

- Set the Media Group that is used for your Featured Media on your Collections Page.
  - This will allow the end user to see a selected set of media for the specified collection. • To use this option, first make a Media Group in LUNA then select the group in the drop down menu (Must be public and not password protected).

- Redefine the collection's Introduction Text (this text is automatically pulled from your Insight Collection and may not need to be updated).
- Change the Header Graphic URL. This Graphic must be exactly 754 x 65 pixels and be available from any browser accessing the collection.
- Indicate what theme will be used by your collection. At the time of this release, only "default" is available. In the future other themes that will define the entire color scheme of the application will be available to set. If you would like to participate in defining Themes, please contact Luna's support department <u>.lunasupport@lunaimaging.com</u>.

# **Defaults for Multi Collection Access**

Collection ID -1 is the default used for any user accessing more than one collection.

E Control Panel - Main						
Console Root	Collection ID	Collection Name	Featured Media G			
📙 ਤ User Managers	RUMSEY~9~1	Japanese Historical Maps				
Collection Managers	LUNADEPLOYI	vid test

# Deleting a Collection from LUNA

Deleting a Collection from LUNA is done in a few steps.

1. Delete the collection from the Admin Tools.

- 2. Run the <u>Merge and Load</u> task
  - a. This will remove the content from the search Index.
  - b. Your LUNA system will not work properly unless you do this step.
- 3. Restart your Jboss or tomcat server.

# Deleting a User from LUNA

Deleting a User from LUNA is done the following way.

**NOTE:** Before you delete the user, Note the ID associated with that user.

Select the User in the Admin Tools and right click and select delete.

Once you delete the user, All Media Groups and Presentations that the user owned will be orphaned.

Open the Presentation or Media Group folder in the Admin Tools and locate any item that was owned by the User you just deleted and change the ID to another User's ID who you would like to pass ownership to. After you finish, <u>run the Maintenance Mode</u> twice.

E Control Panel - Main			
Console Root	Name potato	User ID 2	Description I
LUNA Managers LUNA Managers Calhost - LUNA Server (admin) Calhost - LUNA Server (admin) Calhost - LUNA Server (admin) Calhost - LUNA Server (admin)	Edit Preser	ntation - pot ID: 2	ato 💶 🗵

🗕 🚞 Admin Accounts	registrationEnabled	true	
— 🚞 Application Configuration	lunaServerAddress	192.168.1.100	
– 🗎 Users	adsEnabled	false	
- 🦳 Media Collections	lunaServerPort	8180 false	
– Credentials	sslEnabled		
- Credential Settings	requestPublicContentEn	true	
Evtended Collection Dronerties	publicContentURL0	http://lunacommunitycommons.lunaimagin	
Extended Collection Properties     Extended Collection Properties     Extended Collection Properties	Edit Application Con	figuration - regist 💶 🗵 🔀	
	Attribute: registrationE	nabled	
	Value: true		
	Save	Cancel	

During the installation process these settings were defined. If you need to make modifications to any of these properties, be aware that it will affect how LUNA functions. If you are unsure of what a particular setting is for, do not change it without first contacting Luna support for an explanation of the setting.

Making any change most likely will require the application to be restarted.

# Maintenance Mode

On occasion you will want to put the application into a maintenance mode.

📒 Control Panel - Main	
📄 Console Root	
🔃 🍰 User Managers	
🕂 📒 Collection Managers	
🗄 📃 LUNA Managers	
🗗 🌄 localhost - LUNA Server (admin)

– 🚞 Credential Settings	
– 🚞 Extended Collection Properties	Server UBL: 1921681100 Port: 8180
– 🚞 IP Ranges	
🗕 🕎 Server Maintenance Mode	Send Request

Maintenance Mode can also be used to reload User and Credential Settings. To trigger Maintenance Mode send one request, then send a second to take the system out of Maintenance Mode and reload your settings.

# **Admin Accounts**

Used to control access to the Admin Tools console.

E Control Panel - Main					
Console Root	Admin Name Create	2d			
H- T Collection Managers	umm   wed 20 Sul 2005	12.00.00			
E- LUNA Managers	🛅 Edit Admin Account - adm	in 📃 🗆 🗵			
Iocalhost - LUNA Server (admin)     Admin Accounts     Annlication Configuration	Username:	admin			
– 🗋 Users	Password:	*****			
	Server Admin Permissions:	✓ Read			
		🗹 Edit			
– 🧰 IP Ranges – 🛺 Server Maintenance Mode		🗹 Add			
		☑ Delete			
	Account Admin Permissions	: 🗹 Read			
		🗹 Edit			
		🗹 Add			
		✓ Delete			
	Save	Cancel			

Like in User Manager and Collection Manager sections of the Administrator Tools, The LUNA Manager also has Admin Accounts. These accounts grant access to the Admin Tools. Server Admin Permissions grants access to perform actions in the Admin Tools. Account Admin Permissions grants access to create and manage Admin Accounts.

# Virtual Collections in LUNA

# Introduction

This section describes how to prepare your system to support Insight Virtual Collections in LUNA.

You will need to update your Insight Collection database by running a script that changes a Primary Key on the IRGROUPS table of your Insight Collection Manager database.

You will then need to use the Administrator Tools (6.0.1+) to prepare the virtual collection for LUNA as described in this section.

Once you have completed this preparation, you can publish your virtual collections the same way you publish other collections to LUNA.

# Updating your Insight Database

Warning!!! Before making any database changes, always backup your current database.

The first step is to change the Primary key of the IRGROUPS table in the Insight database that contains your virtual collection.

There are two ways you can do this.

- If you are familiar with how to change primary keys in your database, you can change the Primary Key on the table IRGROUPS from (GROUPID) to (UNIQUECOLLECTIONID, GROUPID, VCID)
- 2. Use one of following database scripts links to update your IRGROUPS table
  - o For <u>MySQL</u>
  - o For MSSQL
  - o For <u>Oracle</u>.

# Preparing your Virtual Collection with the Administrator Tools

Using your Administrator Tools (6.0.1+) open your collection configuration panel for the Virtual Collection you would like to make available in LUNA. Scroll to the bottom of the panel. You will see a button that says "**Prepare Collection Configuration for LUNA**". Select this button. (This button will only show for virtual collections).

Console Root	Institution ID	Collection ID		VC ID	Collection Name
🖶 🍣 User Managers	Daltonicm	1	NA		Visual Resource Collection 1
🗗 🇾 Collection Managers	Daltonicm	1	VC_F	Public_Dalton_Archive	Public Dalton Archive 1

				Edit Visual Attrik	outes
				Edit Browser Attr	ibutes
				Prepare Collection C	Configuration for LUNA
			Sav	/e Cancel	
			_		

Once you have selected the **Prepare Collection Configuration for LUNA** button, you will need to set a New Institution ID for the collection. Make sure this is different than the Source Institution ID.

🛅 Public Dalton Archive - New Institution ID for VC					
	To make this Virtual Collection available as a LUNA Collection, the Collection Configuration needs to be duplicated and you need a New Institution ID. This Institution ID must not be the same as the Source Institution ID. When you click 'Save', your Collection Configuration will be duplicated with the New Institution ID.				
New Instituion ID:					
	Save Cancel				

As described in the previous panel, your collection entry will be duplicated and you will now have two entries for your Virtual collection. The original and now the new one with the New Institution ID and the VC ID of NA.

Institution ID	Collection ID	VC ID	Collection Name
Daltonicm	1	NA	Visual Resource Collection
DALTONVC	1	NA	Public Dalton Archive
Daltonicm	1	VC_Public_Dalton_Archive	Public Dalton Archive

Next you will need to add an additional Collection entry to the User Manager to access the Virtual collection in LUNA.

Under the Collections section of the User Manager, create a new entry and fill in Collection Name, Collection ID, your new Institution ID Server Address and port number. Then save your Collection entry.

🕂 🛫 User Managers 👘 👘	Desk Galeria Andrea da Angres da	Balkastas lastastas

	S	

Next you will need to give a Studio privileged user access to this collection. For instructions on this, follow the "Granting Access to Insight Studio" in the "User's Guide to Basic Collection Building".

Once a user has access to this virtual collection in Studio, they can Publish the collection into LUNA just like any non-virtual collection.

# LUNA Commons

# Introduction

LUNA Commons is a new source for finding valuable, educational content from digital collections built in the Insight Software from <u>Luna Imaging, Inc</u>. and presented in Insight's dynamic new LUNA browser. <u>www.lunacommons.org</u>

# Adding LUNA Commons Content to your LUNA

Adding all the LUNA Commons content is very easy once you have configured your LUNA version to receive the content. <u>This is covered in the installation section of this manual</u>.

Once you have upgraded to 6.2+ you will have a new task in the LUNA Publisher.

Schedule Task	Schedule URL Request	Task List	Task Log
		40	

Notice the new task called Get LUNA Public Content.

Select the Modify button

Every Sun at 0*:0*	inactive	Detail	Delete	Modify
--------------------	----------	--------	--------	--------

You have 4 options when completing this task

- Save Task (will only save the task)
- Save and Run Task (will save and run the task now)
- Save and Schedule Task (will save then execute the task on a schedule)
- o Save, Schedule and Run Task

Next, Use <u>Credentials</u> to assign access to these collections as you would any other collection or you can select "Public Content Allowed" to assign all the Public collections.

Scheduling:		
Run on the following schedule:		
Time of day to run: Hour: Minute:		
Day(s) of week:		
Sun Mon Tues Wed Thu Fri Sat		
Save Task		
Save & Run Task		
Save & Schedule Task		
Save, Schedule & Run Task		

# Sharing your Content with the LUNA Commons

As our parents told us sharing is a good thing. We have made it easy to share selected collections with the world and other institutions. Make sure your server is setup to share collections by following the <u>Installation Instructions</u>.

During the installation, you were asked to create an account. This account was assigned the Content Distribution credential (4). To specify which collections you would like to share, assign them to the <u>Content Distribution credential</u>.

Once you have assigned the collections, you will need to run the <u>Maintenance Mode</u> twice.

Next, you will need to run a task in the LUNA Publisher. Open the LUNA Publisher and choose Task List

Schedule Task	Schedule URL Request	Task List	Task Log
		~ <u>~</u>	

Modify Prepare Public Content

3	Prepare	Public Cont	tent		
Every Sun	at 0*:0*	inactive	Detail	Delete	Modify

Decide how often you want to update your shared content.

You have 4 options when completing this task

- Save Task (will only save the task)
- Save and Run Task (will save and run the task now)
- Save and Schedule Task (will save then execute the task on a schedule)
- Save, Schedule and Run Task

Scheduling:		
Run on the following schedule:		
Time of day to run: Hour: 💌 Minute: 💌		
Weekly Monthly		
Day(s) of week:		
Sun Mon Tues Wed Thu Fri Sat		
Save Task		
Save & Run Task		
Save & Schedule Task		
Save, Schedule & Run Task		

Once the task completes, the LUNA Commons server will try to retrieve your content on its next scheduled run. This may vary and usually it happens about once a week.

# LUNA eCommerce

# Introduction

With the introduction of 6.2.2, LUNA has incorporated a way to support the purchase of images through 3rd party vendors. The interface and setup were designed to be generic with the specific intent to work with <u>Pictopia</u>.

If you are interested in establishing a partnership with <u>Pictopia</u>, email a Program Manager within their Program Services department at <u>partners@pictopia.com</u>.

The buy button is located on the detail page as shown below

# How to set it up

Each collection can be setup to allow the Buy Print button. The configuration is setup in the Administrator tools>LUNA Managers>YourServerName>Application Configuration

El Insight Administration Console				
<u>F</u> ile <u>W</u> indow <u>H</u> elp				
r 📕 Control Panel - Main				
<ul> <li>Console Root</li> <li>User Managers</li> <li>Collection Managers</li> <li>LUNA Managers</li> <li>LUNA Managers</li> <li>a localhost - LUNA Server (admin)</li> <li>Admin Accounts</li> <li>Application Configuration</li> <li>Users</li> <li>Media Groups</li> <li>Presentations</li> <li>Media Collections</li> <li>Shared Media Collections</li> <li>Credentials</li> <li>Credential Settings</li> <li>Extended Collection Properties</li> <li>IP Ranges</li> <li>Server Maintenance Mode</li> </ul>	Attribute publishContentEnabled maintenanceGuid dcpw0 dcid0 registrationEnabled lunaServerAddress adsEnabled lunaServerPort fetchExternalPublicContentGuid sslEnabled requestPublicContentEnabled alternateSearchEnabled publishDistributedContentGuid publicContentURL0	Value false 1223 LUNA LUNA true localhost false 8180 getit false true false true false		

Once you are in here, you will need to add the following settings for each collection that you want to add the Buy Print feature to.

The following table shows the Attributes and the Values need for Pictopia.

ATTRIBUTE	VALUE	Description
buyLinkBaseUrl	http://gallery.pictopia.com/davidrumsey/e/?	Base URL to the service (Pictopia)
buyLinkCollectionId0	RUMSEY~8~1	Attribute CollectionID Part 0
buyLinkCollectionId1	RUMSEY~8~1	Attribute CollectionID Part 1
buyLinkCollectionId2	RUMSEY~8~1	Attribute CollectionID Part 2
buyLinkCollectionId3	RUMSEY~8~1	Attribute CollectionID Part 3
buyLinkParamName0	photo_name	Link Parameter Part 0
buyLinkParamName1	title	Link Parameter Part 1
buyLinkParamName2	fs_url	Link Parameter Part 2
buyLinkParamName3	t_url	Link Parameter Part 3
buyLinkParamSrcField0	Image No	Link Parameter value Source Part 0
buyLinkParamSrcField1	displayTitle	Link Parameter value Source Part 1
buyLinkParamSrcField2	urlSize8	Link Parameter value Source Part 2
buyLinkParamSrcField3	urlSize4	Link Parameter value Source Part 3

The general concept is that when you click on the Buy Print link a new page is launched to the URL defined for the collection and the parameters specified.

buyLinkBaseUrl + buyLinkParamName0 = buyLinkParamSrcField0

This is extended for each Parameter. For example here are the first two parameters that are passed

http://gallery.pictopia.com/davidrumsey/e/?photo\_name=Flowers&title=The%20Rose

And here is a real, full link to Pictopia wth all parameter attached

 $. \underline{http://gallery.pictopia.com/davidrumsey/e/?photo_name=2544A&title=%28Illustrated+Title+Page+t o%29+State%2C+Territorial+and+Ocean+Guide+Book+of+the+Pacific%3A+Containing+The+Time+and+Distance+Tables+...+on+or+Connecting+with+the+Pacific+Coast+and+the+Interior+...+To+W hich+Are+Added+Nine+Large+and+Reliable+Maps+Showing+Principal+Towns%2C+Routes+of+Com munication%2C+etc.+San+Francisco%3A+Published+Semi-$ 

Annually+by+Sterling+M.+Holdredge.+...+1866.&fs\_url=http%3A%2F%2Frumseysid.lunaimaging.co m%2Fmrsid%2Fbin%2Fimage\_jpeg.pl%3Fclient%3DRumsey%26image%3DSIDS%2FD0005%2F2544 A.sid%26level%3D0%26x%3D1276%26y%3D1626%26width%3D2553%26height%3D3253%3Fuseri d%3D15%3Fusername%3Dlunaadmin%3Fresolution%3D6%3Fservertype%3DJVA%3Fcid%3D8%3Fiid %3DRUMSEY%3Fvcid%3DNA%3Fusergroup%3DRumsey3x%3Fprofileid%3D13&t\_url=http%3A%2F% 2Fwww.davidrumsey.com%2Frumsey%2FSize4%2FD0005%2F00054032.jpg%3Fuserid%3D15%26us ername%3Dlunaadmin%26resolution%3D4%26servertype%3DJVA%26cid%3D8%26iid%3DRUMSEY %26vcid%3DNA%26usergroup%3DRumsey3x%26profileid%3D13

#### And the subsequent buy page:

The final area you need to understand is how to access the data contained in LUNA. This will allow you to extract data and image information to pass to the parameters in the URL. The following is meant as an example and references the table above.

In the Pictopia example there are four values passed.

Unique ID of the image ("Image No" is a data field in the David Rumsey Map Collection)

• photo\_name = Image No

Title of the image (displayTitle is the title that is selected in the LUNA Publishing process)

• title = displayTitle

Full size URL (Setting this to urlSize8 will pass the largest image URL to Pictopia)

• fs\_url = urlSize8

Thumbnail URL (Size4 Image URL from LUNA to the Pictopia Crop tool. 1536 pixels Long Side)

• t\_url = urlSize4
